

Become a Community Investor

Bedford Public Schools F.I.R.S.T Robotics Team 1023

"Bedford Robotics creates future engineers and business people; it teaches students life skills to impact their everyday, our community, and prepares them for college. Supporting their passion and helping change lives? I can't think of a better return on investment!" - Ryan Robinson, Community Partner & Director of Western States, U of M

Bedford Express Robotics Team 1023 seeks your partnership to grow the next generation of science and technology leaders by making possible mentor-based programs. Your investment allows 45 Bedford students to learn science, engineering and technology skills through competition. Your gift provides the needed funding to build our robot and travel to robotics competitions around Michigan and the United States. Your support guarantees the acceptance of every student interested in joining and, together, we prepare robotics students with life skills.

Your investment in us fosters a well-rounded life. Not only does Bedford Express compete, we also volunteer in the community raising money for various charities. We build our self-confidence, communication, & leadership through developing relationships with our community and other teams around the USA and other countries. We support each other academically through a peer-to-peer tutoring group and maintaining an average GPA of 3.6.

Since the founding in 2003, we've been recognized by leaders across the state and the nation, including NASA when they honored our work with the Engineering Inspiration award in 2017. We were one of eight teams in the WORLD to receive this distinction out of a group of 3300! Your tax deductible investment makes this entire enterprise possible!

There are many ways to support us—

- * Invest in our team with a monetary donation—this will allow us to purchase materials to build a robot along with being able to pay for all the necessary registration fees just to be a team
- * Provide materials and/or services that will allow us to purchase materials to build a robot along with being able to pay for all the necessary registration fees just to be a team
- * Become a mentor and provide guidance and knowledge
